APPENDIX 1: MEETING PRESENTATION X

INTRODUCTION NOTE

Transfert Environnement et Société (hereinafter “Transfert”) was mandated by Nutrinor – Gilbert Renewable Energy (hereinafter “NGER”) to facilitate discussions, moderate exchanges, and take notes during meetings of the Liaison Committee covering the Dune-du-Nord Wind Farm (hereinafter “PEDDN”) and the Grosse-Île Wind Farm Project (hereinafter “PEDGI”).

This document is not a verbatim transcript. It aims to faithfully summarize the key elements raised during discussions and to reflect the questions, comments, and concerns expressed during the meeting. These elements have been grouped by theme and summarized for information purposes. The content of these minutes should not be considered as direct quotations from NGER or from meeting participants. Scientific clarity, transparency, and methodological rigor guided the preparation of this document.

This document was prepared with the assistance of translation software. The French version remains the official version and should be used as the reference.

1. SUMARY

The Liaison Committee meeting for PEDDN and PEDGI was held on September 9, 2026, at the Municipality of Grosse-Île, in a hybrid format. Twelve members gathered to discuss developments related to the PEDGI project and community engagement mechanisms.

Wednesday, September 9, 2026

9:30 a.m. to 12:50 p.m.

Municipality of Grosse-Île

12 members present

Follow-up actions

- Send members the link to Nergica's video on blade maintenance work.
- Provide English-speaking Liaison Committee members with the English presentations before meetings and conduct meetings in both languages (French and English).
- Send members the questionnaire used for the Municipality of Grosse-Île survey.
- Send members the meeting PowerPoint presentation.
- Send members the Grosse-Île aquifer recharge map published on the PEDGI Facebook page.
- Share the invitation to the September 16 public meeting on the Municipality of Grosse-Île Facebook page and email an invitation to everyone who responded to the opinion survey on the PEDGI project.

Attendance

Category / sector	Organism	Name	Presence
Members – Municipal and Governmental Sector	Municipality of Grosse-Île	Gordon Burke	Present
	Municipality of Grosse-Île	Karina Cyr	Present
	Municipality of Grosse-Île	Kim Clark	Present
	Communauté maritime des Îles-de-la-Madeleine (CMIM)	David Richard	Present
	Communauté maritime des Îles-de-la-Madeleine (CMIM)	Jasmine Solomon	Present
Members – Environmental and community organizations	Centre de recherche sur les milieux insulaires et maritimes (CERMIM)	Marc-Olivier Massé	Present
	Comité ZIP des Îles-de-la-Madeleine	Noémie Pelletier	Absent
	Attention FragÎles	Mélanie Bourgeois	Present
	Tourisme Îles-de-la-Madeleine	Michel Bonato	Present
Members – Economic organizations	SADC Îles-de-la-Madeleine	Daniel Gaudet	Absent
	Chambre de commerce des Îles	Martin Paquet	Present
Proponent representatives	Nutrinor – Gilbert Énergies renouvelables	Jean-Michel Leblanc	Present
	Alliance de l'Énergie de l'Est	Lou Landry	Present
Committee facilitation and coordination	Transfert Environnement et Société	Dominik Boudreault Lapierre	Present
		Isabelle Gagnon	Present

2. MINUTES

Meeting opening

Mr. Jean-Michel Leblanc, Operations Manager for NGER, welcomes the members of the PEDDN and PEDGI Liaison Committee. A brief roundtable gives participants an opportunity to introduce themselves.

Adoption of the agenda

The agenda and meeting objectives are presented:

1. Provide an update on the status of the PEDGI project;
2. Discuss upcoming public participation activities planned under the Community Engagement Plan;
3. Decide whether to add new Committee seats representing land users and community organizations.

The agenda is adopted.
The presentation shared during the meeting is included in appendix 1 of this document.

Approval of the April 23, 2026 meeting minutes

The minutes were sent to all members for validation in May before being posted on the website. Members agree that the minutes will not be read aloud during the meeting.

It is noted that two meetings have been held with the Grosse-Île municipal council since May to present the status of the PEDGI project and NGER's Community Engagement Plan.

Follow-up on actions from the April 23, 2026 meeting

Mr. Jean-Michel Leblanc provides an update on the actions recorded in the previous meeting minutes.

Volume 8 of the environmental impact assessment, submitted to the Ministère de l'Environnement et de la Lutte contre les changements climatiques, was sent to members. It is also available on the Ministry's website.

Communications concerning PEDDN, particularly those related to maintenance work, were sent to members. Completed in July, the work involved blade maintenance, a routine operation after five years of wind farm operation. Specialized technicians found no abnormal wear. Inspections will now be carried out every two years. Mr. Leblanc notes that Nergica produced an explanatory video about comparable maintenance work on wind turbine blades. The video could be shared with members to illustrate the nature of the work.

The agenda includes a discussion of the Liaison Committee's current composition and the possible addition of seats for land users and community organizations.

Meeting language

Mr. Jean-Michel Leblanc asks members for their views on the language of Liaison Committee meetings considering the addition of Grosse-Île residents. He notes that the meeting presentation has been translated into English and will be sent to English-speaking members after the meeting.

Members agree that, since the Committee will now include English-speaking participants, meetings should be bilingual and documentation should be available in English to support full understanding and participation. Everyone should be able to speak in the language of their choice. Although all members understand both languages, not everyone is equally comfortable speaking their second language.

PEDDN update

Mr. Jean-Michel Leblanc reviews the maintenance work completed over the summer. Because the wind turbines must be shut down during the work, the maintenance had an anticipated impact on production. Despite these shutdowns and a few unplanned interruptions due in part to technical factors, PEDDN production is currently 15 % to 20 % above annual projections.

Mr. Leblanc informs members that the wind turbines are temporarily shut down because of a major telecommunications outage that has affected the Magdalen Islands for several days and disrupted data exchanges between the wind farm and the Hydro-Québec generating station. For safety reasons, Hydro-Québec requested that the turbines remain shut down until service is restored.

Over the next few weeks, annual maintenance of all turbine components will also require the two turbines to be shut down alternately. Maintenance at the interconnection substation will require shutdowns from September 26 to 28 and October 10 to 12.

SUMMARY OF DISCUSSIONS	
Questions, concerns or comments	**Responses from NGER or other stakeholders**
What kind of technical issue can cause the wind turbines to shut down?	The wind turbines have a safety system that includes a temperature sensor and can stop production to prevent a problem. A technician must then go to the site to assess the situation. For example, a sensor came loose because of vibrations during the summer.
Is the technician who must go to the site based in the Magdalen Islands or not?	Turbine maintenance is handled by Enercon. The primary response team is based in New Richmond. However, an electrical contractor on the Islands has trained three local workers since PEDDN began operating, and they can carry out certain initial checks and procedures on site.
Was Hydro-Québec able to accept the additional 15 % to 20 % in production?	Yes, it was accepted. It should be noted that, as of September 1st, 85% of the annual commitment had been delivered to Hydro-Québec.

Can you choose the maintenance periods, given the risk of missing major periods of wind and therefore production?	Some work must be carried out by specialized technicians from outside the Islands, so travel and accommodation constraints must be considered depending on the time of year. Maintenance at the interconnection substation must also be coordinated with Hydro-Québec.

Members update

Mr. Jean-Michel Leblanc invites members to share updates from their organizations, if any. No updates are shared at this point.

PEDGI project update

Mr. Jean-Michel Leblanc notes that, on June 23, the BAPE issued a report favorable to the PEDGI project, recognizing its importance to the Magdalen Islands' electricity supply while identifying several considerations. The report recommends strengthening four aspects: community engagement; consideration of climate hazards, particularly erosion and coastal flooding; reassessment of project costs; and protection of bird species with special status.

Mr. Leblanc says that the proponent continued its work in the months following the public hearing and the release of the BAPE report. Commitments were made to the Ministry in response to the commission's recommendations. In particular, he mentions the removal of turbine locations 6 and 7.

Mr. Leblanc announces that the Order in Council authorizing the project was published that morning in the *Gazette officielle du Québec*. He notes that the process is continuing because various ministerial authorizations are still required. The project partners also wish to maintain dialogue with the community to continue improving the project, particularly with Grosse-Île residents.

The discussion then turns to the survey conducted by the Municipality of Grosse-Île over the summer, following the BAPE's recommendation to consult the public about the PEDGI project. The survey was intended for permanent residents and local property owners. Approximately 25 % of eligible respondents participated before the survey closed on August 5. A large proportion expressed an unfavorable opinion of the project, mainly because of concerns about the environment, the fishing industry, natural environments and visual impacts. Mr. Leblanc says the proponent views these results as guidance that may be used, where possible, to adjust certain aspects of the project or provide additional information about the concerns raised.

The public information strategy concerning the Order in Council, particularly in Grosse-Île, is also discussed. The proponent plans to issue a news release to local media in the early afternoon, followed by a post on the project's Facebook page. These communications will also serve as reminders for residents about the two public meetings scheduled for the following week, where they can learn about the project and take part in the planned engagement mechanisms.

Due to time constraints, the section of the presentation on project updates and optimization measures is not presented. Members will be able to review it after the meeting and ask questions later, if necessary.

SUMMARY OF DISCUSSIONS	
Questions, concerns or comments	**Responses from NGER or other participants**
You already operate a wind farm in an environment like the PEDGI project area. You can use it as a source of information when addressing the concerns raised.	
Do you currently curtail operations at PEDDN as a measure to reduce bird mortality?	No, but we have expressed interest in a smart-detection research initiative led by the renewable energy cluster, to determine whether PEDDN could serve as a pilot project. We have also committed to conducting a study of bird behavior as birds approach the existing site.
Will the PEDGI wind turbines be shut down during bird migration periods?	They will be shut down when visibility is less than 200 meters during migration periods.
Could that affect production?	It is a compromise intended to reduce potential impacts on birds without significantly affecting production. The measures could be adjusted based on monitoring results.
Could this create a mechanical issue?	We will need to avoid stopping and restarting in very high winds. Required waiting periods will have to be observed.
Commitment 3, the cost reassessment, received less attention.	We are currently reassessing the costs. This is not a formal commitment to the Ministry, which did not require it, but it is a necessary step for us.
Could retaliatory tariffs affect components that may come from the United States?	We are not at that stage yet. To be fully transparent, the pricing obtained to date is competitive, but the retaliatory tariffs announced this week have not yet been factored in. For now, we are focusing more on a detailed assessment of erosion-prevention measures and project engineering.
Why did the BAPE raise the issue of project cost?	The project was estimated at $80 million in 2023. It clearly needs to be reassessed because of additional erosion-related measures, tariffs and retaliatory tariffs, as well as the significant increase in construction costs in recent years.
Is the Municipality of Grosse-Île satisfied with the number of people who responded to the survey?	Municipality of Grosse-Île Participation could have been higher. The survey took little time to complete and was available on paper and online, making it accessible even to people with mobility challenges or who were away from home.
Could more than one person from the same household respond?	Municipality of Grosse-Île Yes. Respondents were required to provide their name and address.
Did the survey reveal any trends, for example among people living closer to the proposed site?	Municipality of Grosse-Île Some of the people who may be most affected, including those who requested additional visual simulations, did not take the time to respond. This is

	disappointing because the survey demonstrated our willingness to consult them, but they did not participate.
Who prepared the survey, and were the results made public?	**Municipality of Grosse-Île** The Grosse-Île administration prepared the survey, which was approved by the municipal council. There was not enough time to conduct a large-scale consultation. We confirmed with the Ministère des Affaires municipales what steps could be taken and which questions could legally be asked without holding a referendum. The results were made public in the council minutes, on the municipal website and on the municipality's Facebook page.

Community Engagement Plan update

Mr. Jean-Michel Leblanc briefly summarizes the follow-up to the Community Engagement Plan submitted by the proponent and discusses the upcoming public meetings scheduled for September 16 in Grosse-Île to create the Working Group and September 17 in Cap-aux-Meules to update the Liaison Committee. The self-nomination process through which residents will select their representatives for these two bodies during the meetings is explained. The proposed composition of the Working Group and the expanded Liaison Committee is presented.

Members are invited to comment on the proposal to add one representative from community organizations and one representative from organizations representing land users to the Liaison Committee. Currently, they are not convinced that these additions are warranted.

It is proposed that two representatives from the Municipality of Grosse-Île be added to the Working Group, ideally one elected official and one member of the municipal administration. Regarding organizations, Mr. Leblanc says that CAMI intends to share the invitation to the September 16 meeting but does not wish to participate in the Working Group at this time.

SUMMARY OF DISCUSSIONS	
Questions, concerns or comments	**Responses from NGER or other participants**
Must a person be a permanent resident of Grosse-Île to serve on the Working Group as a resident representative?	There is no legal framework governing the Working Group. Permanent residency is generally proposed as a criterion for the self-nomination process, but some flexibility could be allowed so that Grosse-Île residents can choose the people they believe are best able to represent them.
I think it would be preferable to have a single committee.	We considered that option, but we wanted to give the Grosse-Île community more opportunities to express its views, which is why the Working Group was created. Over time, we will assess whether a single body would be more appropriate.

It would be unfortunate to exclude people who cannot attend the September 16 meeting but may be interested in participating in the Working Group.	If people express interest but truly cannot attend the meeting in person, please put them in touch with us.

Next steps and Meeting conclusion

Mr. Jean-Michel Leblanc summarizes the next steps for the PEDGI project, primarily with respect to public participation.

He thanks the members for taking part in the meeting.

APPENDIX 1: MEETING PRESENTATION

Dune-du-Nord and Grosse-Île Wind Farms Liaison Committee

Grosse-Île Wind Farm Project
Update

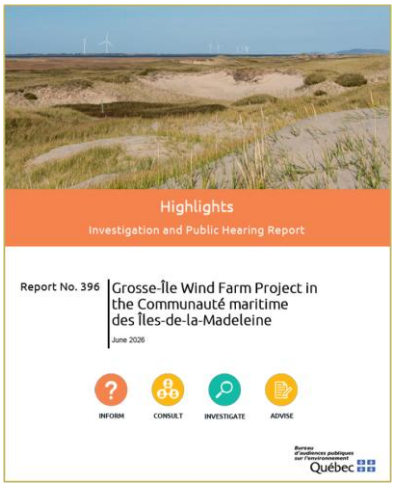

BAPE Report - Recommendations

The project should be authorized

The Commission of Inquiry is of the opinion that the project should be authorized, given the electricity supply context in the Îles-de-la-Madeleine, which relies mainly on the Cap-aux-Meules thermal generating station.

Authorization would be conditional on the government receiving additional information on four topics :

1. **Strengthen community engagement**
   Maintain ongoing dialogue with the Grosse-Île community and ensure local concerns are documented and considered
2. **Consideration of climate hazards (erosion & flooding) flooding)**
   Continue assessing erosion and coastal flooding risks and work collaboratively on any required stabilization measures.
3. **Reassessment of the project's cost**
   Update project cost estimates and clarify the long-term economic benefits for local and regional partners.
4. **Protection of special-status bird species**
   Verify the effectiveness of bird protection measures and implement additional safeguards where needed.

Report No. 396 — published June 2026

11

Community Consultation Report – Municipality of Grosse-Île

Background of the Process

Following a recommendation from the BAPE, the municipal council wished to consult residents in order to gather their views on the proposed project.

Objective	Participation	Process
• Gather the opinions and concerns of permanent residents and landowners regarding the proposed project.	• Questionnaire open to permanent residents and property owners of the Municipality of Grosse-Île. • Questionnaire available online and in paper format.	• Questionnaire open for two weeks and closed on August 5, 2026. • Eligibility of responses verified by three municipal representatives.

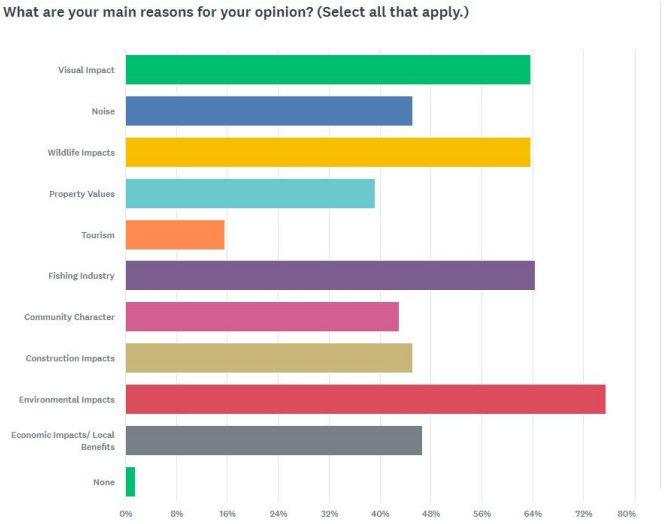

Participation	**140**	completed questionnaires	**122**	eligible responses	≈ 25% of the eligible population	
Results	**98**	opposed to the project	**18**	in favour of the project	**6**	undecided

Consultative process: it was neither a referendum nor a legally binding vote.

Community consultation report – Municipality of Grosse-Île

Main Reasons Underlying Respondents' Views

Additional findings based on the consultation results provided by the Municipality of Grosse-Île.

Project update and optimization measures

Initial wind turbine positions

- Position #4: 1.7 km from the nearest "house" (former B&J)
- Alternative position #5:
  - Numerous wetlands
  - Near position #3 — Irregular wind and turbulence

14

Project update and optimization measures

Optimized wind turbine positions

- Optimization by moving position #4 by 120 metres to the southeast
- New position #4*: 1.8 km from the nearest "house" (former B&J)

15

Project update and optimization measures

Preliminary Road, Turbine Pad and Substation Layout

Optimization work is underway

- Size of pads and foundations
- Shape and orientation of pads
- Road between turbines 1 and 2
- Substation size and equipment

16

Project update and optimization measures

Visual simulation with original position #4 (view from Keating's Point)

Project update and optimization measures

Visual simulation with the new position #4 (view from Keating's Point)

Project update and optimization measures

Visual simulation with the original position #4 (view from Grosse-Ile North)

Project update and optimization measures

Visual simulation with the new position #4 (view from Grosse-Ile North)

What's happening now

- Order-in-council of the Government of Québec authorizing the project;
- September 16: meeting to create the Grosse-Île Working Group;
- September 17: Liaison Committee update meeting and call for applications.

Receiving an Order in Council is an important milestone, but it is not the end of the process. We will continue the discussion with the community with a view to improving the project so that it better meets local needs while helping to reduce the Îles-de-la-Madeleine's reliance on fossil fuels.

Conditions Attached to the Order in Council

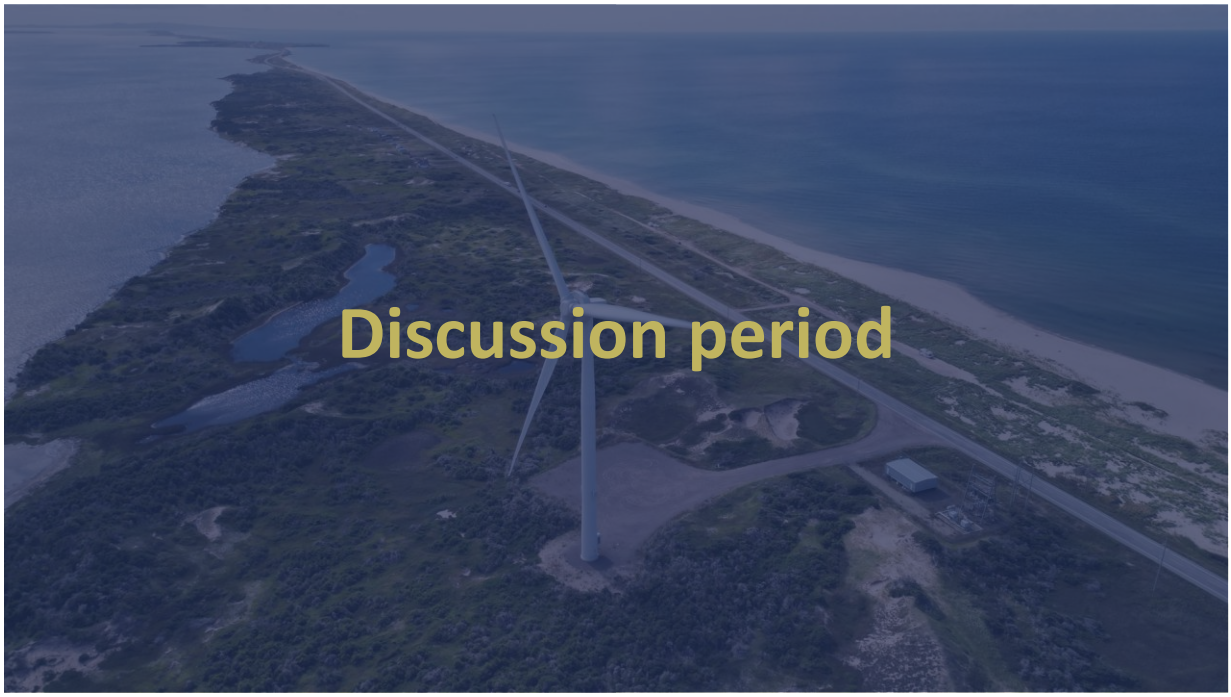

1. **Compliance** with the terms and measures set out in **the environmental impact assessment**
2. **Noise climate monitoring program** for the construction and decommissioning phases
3. **Landscape monitoring program**
4. **Bird and bat mortality m**onitoring program
5. **Study of bird behaviour near the wind farm.**
6. **Compensation for permanent impacts on wetlands and water bodies**
7. **Liaison committee** during the construction, operation and decommissioning phases of the wind farm

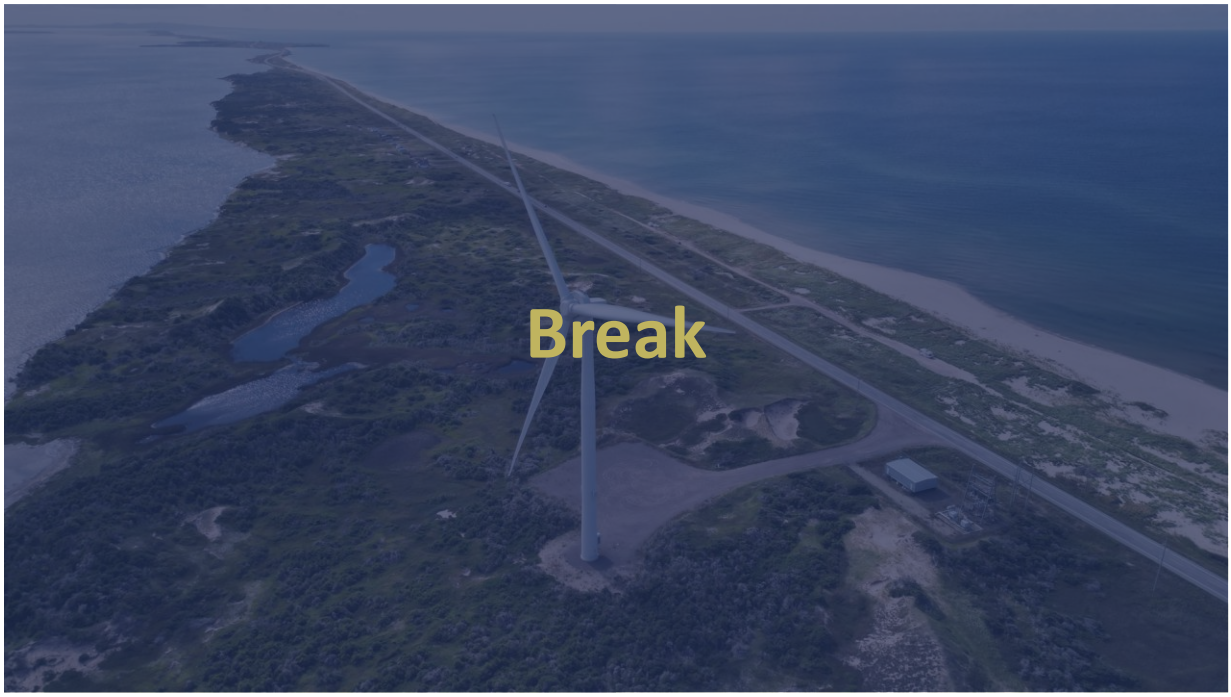

22

Project timeline

2022-2025	2025-2026	2027-2028	2028-2058	2058

23

Break

Follow-up on the Community Engagement Plan

Scope of the Plan

- Aims to **structure and guide information-sharing, dialogue, and follow-up activities** with the community
- Emphasizes the **quality of relationships with the community**, a key aspect of the project
- **Translates the findings** from the engagement efforts conducted to date **into a clear and coherent engagement approach**, tailored to the current phase of the project
- Support the **implementation of commitments**, **and clarify governance and follow-up mechanisms**
- Designed as a **living document**, evolving with project progress and ongoing discussions with the community
- Developed in line with **best practices in community relations**

27

Community Engagement Plan

Implementation progress

30	9	4	2	15
Total actions	Completed 30 %	In progress 13 %	Ongoing 7 %	Upcoming 50 %

Completed to date — key milestones

- **Pillar 1 — Accessibility, clarity & information sharing**
  - Liaison Committee engaged to improve information and communication mechanisms
  - Press release issued on the strong performance and positive impacts of the Dune-du-Nord Wind Farm
  - Two fact sheets on the project and the engagement approach for the Grosse-Île residents
  - Engagement approach shared with local organizations through targeted meetings
- **Pillar 3 — Concerns & follow-up on commitments**
  - Reporting management procedure updated
- **Pillar 2 — Ongoing dialogue with the community**
  - Liaison Committee mandate and composition reviewed
  - Validation and revision workshop held on the proposed Committee adjustments
  - Meeting schedule and consultations activities adjusted to align with the fishing season
  - Additional visual simulations with Grosse-Île have been completed
- **Pillar 4 — Oversight of the construction phase & impacts**
  - Upcoming

Community Engagement Plan

Current focus and next steps

In progress (4)

- Updating information tools (website, social media, targeted communications)
- Adapting communication channels to the local context in Grosse-Île (postings, local relays, mailings)
- Call for applications from residents to the Liaison Committee and the Working Group (summer 2026)
- **Broader representation on the Liaison Committee (seats for community/social organizations and land users)**

Ongoing (2)

- **Bilingual Liaison Committee meetings held in Grosse-Île whenever possible**
- Participation in local public activities and events to support dialogue

Upcoming (13)

Fall 2026

- **Meetings to create the Working Group in Grosse-Île and to expand the Liaison Committee in Cap-aux-Meules (September 16 and 17)**
- Establishment of the Grosse-Île Working Group for the pre-operational phase, with an established work plan
- Sharing concrete examples of comparable wind projects
- Development of an evolving profile of residents' perceptions, concerns and expectations
- Assesings the feasibility of creating a Grosse-Île liaison officer position (with CAMI and the municipality)
- Periodic reports on recurring issues and concerns to the Liaison Committee

2027–2028 · Construction phase

- Construction phase planning: review of issues, traffic and heavy-equipment transport plans, preventive communications and impact monitoring with the Liaison Committee and the Working Group

Community Engagement Plan

Upcoming public participation activities – Meetings to create the Working Group and update the Liaison Committee

Objective:
Select citizen representatives to serve on the **Grosse-Île Working Group** and the **PEDDN and PEDGI Liaison Committee** through a process designed to foster diverse participation and community representation

Grosse-Île Working Group

Wednesday, September 16
6 : 30 pm to 8 : 30 pm
Gymnasium, Grosse-Île

Liaison Committee

Thursday, September 17
6 : 30 pm to 8 : 30 pm
Cap-aux-Meules community hall (Town Hall)

Community Engagement Plan

Meeting format

Presentation
- Update on the PEDGI project since the BAPE;
- Community Engagement Plan – review of the Liaison Committee and creation of the Working Group.

Explanation of the process and creation/update activities
- Grouping of citizens;
- Each interested person states their interest in joining the Working Group or the Liaison Committee, as applicable
- If there are more candidates than available seats, participants decide among themselves who will represent them, based on the established and proposed criteria;
- The full group reconvenes, and the selected representative(s) are introduced.
